

May 21, 2016

Dear OpenIDEO Amplify community,

As founder and CEO of Komaza, I would like to share that Komaza is committed to structuring a joint development agreement to work with Shamba.io in the design and testing of this essential technology platform.

After 10 years planting millions of trees with over 6,000 farmers, we have first-hand experience in the extreme organizational complexity faced by our extension staff of over 80 workers each planting and harvesting season. As we look to scale our model to millions of farmers across East Africa, we see Shamba.io as an essential intelligence tool. We believe in the Shamba.io team's ability to design and build this platform, and would be happy to provide access to our expertise, staff and farmers across the development lifecycle.

We are looking forward to hosting Shamba.io's design research project from 5/25 - 6/19 as the kickoff to this high-potential partnership.

Regards,

Tevis Howard
