Haniyeh Shariatmadary is a researcher committed to the scholar practitioner model that affirms that research must lead to positive change. Her research focuses on the systematic analysis of economic activity and its interaction with the biophysical and socio-cultural environment in which all economic activity is embedded. She is especially interested in identifying practical assessment measures that can track and evaluate the long-term implications on economic activity on its context systems. Her current research focuses on the central role of food in the economy and understanding the food system from a circular economy model perspective where food waste is incorporated in the economic analysis of the value of food and its pricing and income distributions effects. Haniyeh has an undergraduate degree in economics and a master's degree in system analysis and economic planning.
