

**A SNAP SHOT OF OUR CURRENT PARTNERHIPS AND WORK**

Our core business is agriculture that restores and conserves the environment. Our idea is to include PWA as we have ideal working conditions so that they may improve their challenged livelihoods while becoming conservation champions and ambassadors. They will be engaged in skills training, on farm employment and sell to us their surplus produce as Self Help Groups that we shall help them form for processing which we will sell to the market.

We have fish ponds, beehives, agroforestry, ornamental fish green house, and outdoor community learning site however would like to focus on value added Moringa agroforestry and Mushroom indoor farming for PWA.

**Really cool work and learning environment that is easy to replicate (over 10 Ha tree cover)**

**NETFUND Green Innovations Award CEO and Board of Trustees excited to visit us in May 2017 for Monitoring and Evaluation of our project after granting us**

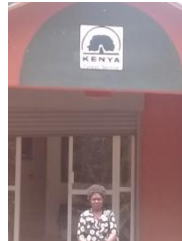

We invite Kenya Wildlife Services to guide on biodiversity management. See our agroforestry demo

We focus on recycling our farm waste in our farming practices & keeping it organic.

Strategy meetings with Kenya Forestry Services & Kenya Fisheries department

NETFUND granted us USD 2,427 in 2016 & Total Eco Challenge recognizing our work (trophy) in 2016.
