

**OASIIS**  
**Opening Access to Sustainable Independent Income Streams**  
**Letter of support**

**Peat Fire Studios Ltd** represented by **Warren Puckett** is pleased to endorse and support the action submitted by Assist Social Capital in response to the OpenIDEO BridgeBuilder Challenge. Addressing the urgent global challenge at the intersections of peace, prosperity and planet in radically new ways.

The project aims to build an economy which is equitable, fair, and regenerative, for people and planet. By hosting and supporting organisations which contribute to a constructive, rather than destructive economy, and connecting them with social investment, we can accelerate the over-due transition to a socially and environmentally just economy.

We believe that this initiative will help by helping to establish a social capital infrastructure platform that can become the basis for using some of the exciting current technologies such as distributed applications (dApps), smart contracts and a distributed immutable ledger (blockchain) to allow all sorts of value to be accounted for and acknowledged. For too long, we have lived in an overly extractive economy that did not acknowledge all of the total costs and values in our interdependent world. We believe this important work can help make a profound difference in how we account for all the inputs (and outputs) in our world.

**Peat Fire Studios Ltd** as an end user within this socially and environmentally conscious business community, fully support the further development of OASIIS and its activities. We will support this action by providing advice and feedback on the idea to Assist Social Capital and contribute to the project activities, helping disseminate the project idea and activities in our community and taking part in the main events foreseen in the action, where possible.
