Mapping the Activity Space of Urban Mothers in Cité Soleil, Haiti to Determine Areas of Intervention

GIS mapping and case narratives will lead to user oriented planning of health services through inclusion and touchpoints for mothers/caregivers.

- 60% of her time is spent in the factory while her children stay in creches
- 10% of her time is at the market or city center
- 25% is split between the household and neighboring communities
- 5% is spent at the church

**The factory worker, Rose**  
Married mother of four children

For Rose, we will send SMS at the end of her working shift to remind her on immunization services. Awareness and information about immunization will be provided at the factory. Weekend vaccination near her home will be made available.

- 40% of her time is at the market selling her crafts with her child

**The young Artisan, Mimi**  
Single mother of a newborn

Mimi will receive SMS to alert her on the RI outreach service at the market on Wednesdays. Community health workers will follow-up her newborn and ensure she gets the information she needs on immunization.

- 40% of time spent at the household or in the community
- 20% is split between the church, community gatherings, and neighboring communities
