

We would like to introduce to you a product that has the potential to reduce environmental waste, an estimated 20 to 35%. The Refrigerated Multi-Beverage Dispenser is a revolutionary product that was carefully planned and designed to address the concerns of the 21st century. The RMBD serves beverages using a vacuum sealed pouch, an expanding market already existent in 6 continents and 60 countries. This market now includes alcohol beverages, wines, mixed drinks, teas, juices, iced coffee, designer waters and dietary supplements.

By teaming this appliance up with the vacuum-sealed pouch, the benefits seen are bulk savings, prolonged freshness of the beverage, multiple beverage dispensing at the touch, countertop convenience, along with a drastic reduction in environmental waste. The RMBD appliance and the vacuum-sealed pouch products will also generate savings in transportation, storage and safety issues, etc.

Another area in which the RMBD will aid the environment will be bottle corks, metal and plastic twist top caps which generate waste which the RMBD and plastic bulk pouch purchases will reduce. Here's how: the pouch bulk system will enable the individual to use his or her personal washable beverage container which will eliminate non-biodegradable waste and generate savings for the knowledgeable industry, business owner, family and individual.

We believe that this market, along with the pressing environmental issues of today, we will not only benefit wise consumer, but the planet as well. We offer the RMBD as an alternative to the costly and not-so environmental friendly small beverage container. Our goal is to educate the consumer by promoting consumer awareness and grabbing their attention as far as focusing on our part in aiding in environmental issues.
